<tbody>
<tr>
<td>System A</td>
<td>-2.9 kPa (-60 psf)</td>
<td>-1.9 kPa (-40 psf)</td>
</tr>
<tr>
<td>System B</td>
<td>-7.2 kPa (-150 psf)</td>
<td>-4.8 kPa (-100 psf)</td>
</tr>
</tbody>
</table>

Notes:
- Allow products: Only equivalent products included into the roofing system’s report are admissible.
- Optional components: Components of the roofing system designated as optional may be included or excluded from the roofing system which will not change the published dynamic uplift resistance (DUR).
- Safety factor: As required by in the CSA A123.21 Standard, the published dynamic uplift resistance (DUR) are reduced by a safety factor of 1.5 (SF of 1.5)

Admissible wind uplift load calculation:
An online calculator is available at [www.sigders.ca](http://www.sigders.ca). The user will have to provide the following information:
- building location;
- building geometry;
- building exposure;
- building openings;
- building importance factor.

The calculator will display the allowable design load of the roof’s field surface, edges and corners as well as the dimensions of the edge and corner zones.

Technical Advisories:
Assessment reports must be read in conjunction with technical advisories issued by exp Services Inc.

Values:
For this document, the metric values are the standard and values in parentheses are for information only.

Notice:
Exp Services inc. reserve their right to withdraw, without prior notice, the test report performed as per CSA A123.21 Standard.
