- Allow products: Only equivalent products included into the roofing system’s report are admissible.
- Optional components: Components of the roofing system designated as optional may be included or excluded from the roofing system which will not change the published dynamic uplift resistance (DUR).
- Safety factor: As required by in the CSA A123.21 Standard, the published dynamic uplift resistance (DUR) are reduced by a safety factor of 1.5 (SF of 1.5)
- Admissible wind uplift load calculation: An online calculator is available at www.sigders.ca. The user will have to provide the following information:
  - building location;
  - building geometry;
  - building exposure;
  - building openings;
  - building importance factor.
- Technical Advisories: Assessment reports must be read in conjunction with technical advisories issued by exp Services Inc.
- Values: For this document, the metric values are the standard and values in parentheses are for information only.
- Notice: Exp Services Inc. reserve their right to withdraw, without prior notice, the test report performed as per CSA A123.21 Standard.
