DESCRIPTION

SOPRAFLASH FLAM STICK is a base sheet membrane composed of SBS modified bitumen and a glass mat reinforcement. The surface is covered with a thermofusible plastic film and the self-adhesive underface is covered with a silicone release film.

SURFACE PREPARATION

Surfaces must be clean, dry and free of loose particles. The membrane is installed over the substrate previously primed with one of the ELASTOCOL STICK primers.

INSTALLATION

SELF-ADHESIVE

SOPRAFLASH FLAM STICK is adhered to the substrate by peeling off the release silicone release film.

Once the membrane is in place, apply pressure over the whole surface using a membrane roller to ensure a complete and uniform adhesion.

When completing the end lap, burn the plastic film over the last 150 mm (6 in) of the membrane before installing the next membrane. Finish the application by welding the last 25 mm (1 in) of the side lap using a propane torch and a membrane roller.

Application temperatures summer grade: 10 °C (50 °F)

Application temperatures winter grade: -10 °C (14 °F)

FOR COMPLETE INFORMATION ON PRODUCT INSTALLATION, PLEASE CONSULT YOUR SOPREMA REPRESENTATIVE.
