MOD-BIT SOPRASMART BOARD 180 COLD APPLIED SYSTEM

(AARS) ADHESIVE APPLIED ROOFING SYSTEM

Roofing System Summary

Cap sheet membrane:	Modified bitumen membrane / Torch applied or self-adhering
Base sheet membrane:	N/A
Cover board:	Board composed of a SBS modified bitumen and a semi-rigid asphaltic board 914 x 2438 x 3,2 mm (3’ x 8’ x ⅛”) / Adhered with Duotack
Insulation:	Polyisocyanurate foam insulation board 1220 x 1220 x 38 mm (4’ x 4’ x 1½”) Adhered with Duotack
Vapor barrier:	Self-adhering membrane
Thermal barrier:	Optional
Decking:	Steel deck

Dynamic Uplift Resistance (DUR) as per CSA A123.21

System Designation	Measured Value	Computed Value (To Include 1.5 Experimental Factor)
A	-5,4 kPa (-112 psf)	-3,6 kPa (-75 psf)
B	-6,3 kPa (-131 psf)	-4,2 kPa (-87 psf)
C	-6,5 kPa (-135 psf)	-4,3 kPa (-90 psf)

	Attachment method : Torch applied			
Soprema	Sopralene Stick HR GR			
	Attachment method: Self-adhered			

BASE SHEET MEMBRANE
TESTED PRODUCT : N/A

COVER BOARD		
TESTED PRODUCT : High-density board composed of a non-woven polyester reinforcement membrane factory-laminated on a semi-rigid asphaltic board		
System	**Application Method**	**Fastening Rate**
A	Adhered with Duotack	Ribbons at 305 mm (12 in)
B	Adhered with Duotack	Ribbons at 152 mm (6 in)
C	Adhered with Duotack	Ribbons at 102 mm (4 in)
ELIGIBLE THICKNESS(ES)		
3,2 mm (⅛ in)		
FASTENING METHOD

General Notes

1. **Decking:**

   The tests performed by **exp** services inc. («**exp**») were performed over a standard roll formed steel deck profile, with a galvanized or aluminum / zinc alloy coating finished, as per ASTM A653, A792, A1008 or CSSBI 10M standards, bearing a thickness of 0.76 mm (0.03 inch) minimum (commonly defined as 22 gauge), corresponding to the ASTM A653M grade SS 230, having a yield point of 230 MPa (33 ksi) and a tensile strength of 310 MPa (45 Ksi).

   Equivalency; tests have demonstrated that the self-adhered vapour retarder in the system herein described is suitable for application over properly prepared concrete deck primed with Elastocol Stick or Elastocol Stick Zero.

   Equivalency; tests have demonstrated that the heat welded vapor barrier in the system herein described is suitable for application on concrete deck properly primed with Elastocol 500.

   Tests could be conducted on 4 'x 8' x ⅝ "standard plywood deck to assess eligibility for possible equivalencies.

   The deck's fastening to the supporting structure must be strong enough to resist wind uplift loads (as defined per NBC requirements).

2. **Deck equivalency products:**

   18 to 22 gage steel deck. Wood or concrete deck which testing gave equivalent or superior uplift resistance than the value specified in the "Fasteners Pull Out Resistance" section.

3. **Fasteners Pull Out Resistance:**

   Testing were conducted in laboratory according to ANSI/SPRI FX-1 2011 standard, over a minimum of 10 test samples on a ***Com-Ten*** apparatus over steel deck (unless stated otherwise).

4. **Adhesive Pull Resistance:**

   Testing were conducted in laboratory over 3 test samples, according to ANSI/SPRI IA-1 2010 standard on a ***Com-Ten*** apparatus over steel deck (unless stated otherwise) or, according to ASTM D1623 standard over a universal press testing bench, for in-between materials.

5. **Note on adhesive:**

   Follow all guide lines or supplementary instructions from the manufacturer regarding adhesive application.

6. **Equivalent products:**

   Only the products listed in this report under eligible products are deemed acceptable as substitute to the tested products. Any other modifications must be requested in written, on **exp** application form, to be studied for approval.

7. **Optional components:**

   Any components of this roofing system listed as optional, may be removed from the roof design. Inclusion or exclusion of the said component having no effect on the published dynamic uplift resistance results. (DUR).

8. **Experimental factor:**

   In accordance with CSA A123.21 standard, the published dynamic uplift resistance (DUR) include a computed experimental factor of 1,5.

9. Building Wind Load Calculation:

An online calculator is available at http://www.exp.com/fr/rooftesting.

The calculator will compute, the Wind Load of any given building, for field, perimeter and corners, as per 2015 CNB requirement, without experimental factor. It will also compute perimeter's and corner's zone dimensions.

10. Technical Advisories:

This roof system assessment reports must be read in conjunction with any issued technical advisories from **exp**.

11. Notice :
