

# **Roof System Assessment Report** of Wind Uplift Resistance (ISO 17025)

| Document Number:  | PUB-DRU210498 |  |
|-------------------|---------------|--|
| Publication Date: | 2012-02-01    |  |
| Revised:          | 2015-06-23    |  |
| Revaluation Date: | 2018-06-23    |  |

## Supplier:

## Mod-Bit XpressISO Duotack adhered System, Adhesive Applied Roofing System (AARS)

## **Roofing System Summary:**

Cap sheet membrane: Modified Bituminous membrane or allowable products Cover board: Factory laminated Composite board or allowable products

Insulation: Optional

Vapour barrier: Membrane or allowable products

Thermal barrier: Optional Steel Deck Decking:

Dynamic Uplift Resistance (DUR)as per CSA A123.21:

| Description | Test observation reading | With SF of 1.5     |
|-------------|--------------------------|--------------------|
| System A    | -3.6 kPa (-75 psf)       | -2.4 kPa (-50 psf) |

### Note: Allow products:

Only equivalent products included into the roofing system's report are admissible.

## **Optional components:**

Components of the roofing system designated as optional may be included or excluded from the roofing system which will not change the published dynamic uplift resistance (DUR).

### Safety factor:

As required by in the CSA A123.21 Standard, the published dynamic uplift resistance (DUR) are reduced by a safety factor of 1.5 (SF of 1.5)

### Admissible wind uplift load calculation:

An online calculator is available at www.sigders.ca. The user will have to provide the following information:

- building location;
- building geometry;
- building exposure;
- building openings;
- building importance factor.

The calculator will display the allowable design load of the roof's field surface, edges and corners as well as the dimensions of the edge and corner zones.

### **Technical Advisories:**

Assessment reports must be read in conjunction with technical advisories issued by exp Services Inc.

For this document, the metric values are the standard and values in parentheses are for information only.

Exp Services Inc. reserve their right to withdraw, without prior notice, the test report performed as per CSA A123.21 Standard.

|                       | Sopraierie Mariiriodiri Giv | Soprapiy Trailic Cap 300 | 561                     |
| - Attachment mode:    | Heat welded                 |                          |                         |

## **Composite board:**

| - | Allowable products:      | Soprema                        |               |                      |
|---|--------------------------|--------------------------------|---------------|----------------------|
|   |                          | XpressISO                      | XpressEPS     |                      |
| - | Allowable thickness:     | Between 51 mm (2 in.) and 1    | 27 mm (5 in.) |                      |
|   | Adhered Attached Pattern | Adhesion mode Adhesive spacing |               | Adhesive spacing     |
|   | For System A result      | Ribbons                        |               | 305 mm (12 in.) o.c. |
| - | Attachment type:         | Duotack                        |               |                      |
| - | Attachment supplier:     | Soprema                        |               |                      |

See optional products table Insulation (optional):

# Vapour Barrier:

| - | Allowable products: | Soprema                                      |   |  |
|---|---------------------|--|---|--|
|   |                     | Sopravap'R                                   | Sopralene Stick Adhesive                  |  |
| - | Attachment mode:    | Adhered (Primer required on allowable t      | thermal barrier or wood deck and concrete |  |
|   |                     | deck with Elastocol stick or Elastocol Stick | c Zero).                                  |  |
| - | Attachment type:    | Self-adhering membrane                       | ·   |  |

Thermal Barrier (optional): See optional products table

## **Decking:**

| - Type:                                       | Galvanized construction steel or coated with an aluminum/zinc alloy or PVC in  |
|---|--|
|   | accordance with ASTM A653, ASTM A792, ASTM A1008 or CSSBI 10M Standards.   |
| - Supplier:                                   | Generic  |
| - Thickness:                                  | 0.76 mm (0.03 in.) minimum, with a yield strength of 230 MPa (33 ksi) and a tensile strength of 310 MPa (45 ksi) commonly defined as being of a 22 gauges minimum thickness. |
| - Attachment method:                          | The deck's fastening to the supporting structure must be strong enough to resist wind uplift loads (adjusted as per NBC requirements).                                       |
| - Fastening uplift resistance (CSA S136.F04): | 2.09 kN (470 pf)   |
| Equivalence:                                  | Steel deck thickness of 18 to 22 gauges or wood deck or concrete deck with pullout resistance equal or higher than the Fastening uplift resistance specified above.          |
